**Hacking the
statistics office**

 **github.com/datenguide**

 **datenguide**

datengui.de
@datenguide

Official Statistics

- Statistics published by **governments** and other **public bodies**
- Statistics about **society**, the **environment** or the **economy**
- Statistics created by **statistical offices** on a national or regional level

Examples

- **Schools**
(students, graduates by school type)
- **Garbage removal**
(recycling, residual waste, etc.)
- **Migration & naturalisation**
(origin, number of years in the country)

Image credits: Crop of original painting “Anbetung der Hirten” by Giorgione (public domain)

Where does data come from?

- **Macro census** (“Volkszählung”)
- **Micro census**
- **Secondary statistics**
- Statistics based on **population registries** (“Registerzensus”)

public good

-> open data

What is it good for?

- **Reporting:** Backing your story with numbers, finding stories in data
- **Fact checking** & debunking misinformation
- **Lobbying** for social causes

Limits

- Privacy: All data is **anonymised**
- Only **aggregate-level data** gets published (how many instead of who)
- People or companies cannot be identified

Example

👉 web.br.de/interaktiv/landtag-demografie/

open data

**-> available online,
free for you to reuse.**

5 ★ Open Data

- ★ Available on the **Web**, under an **open license**
- ★ **Structured** data (Spreadsheets over PDF)
- ★ **Non-proprietary** data formats (CSV over Excel)
- ★ Use **URIs** (let people link to data)
- ★ Link to related data (discoverability, context)

(Tim Berners-Lee, <https://5stardata.info>)

Official statistics in Germany

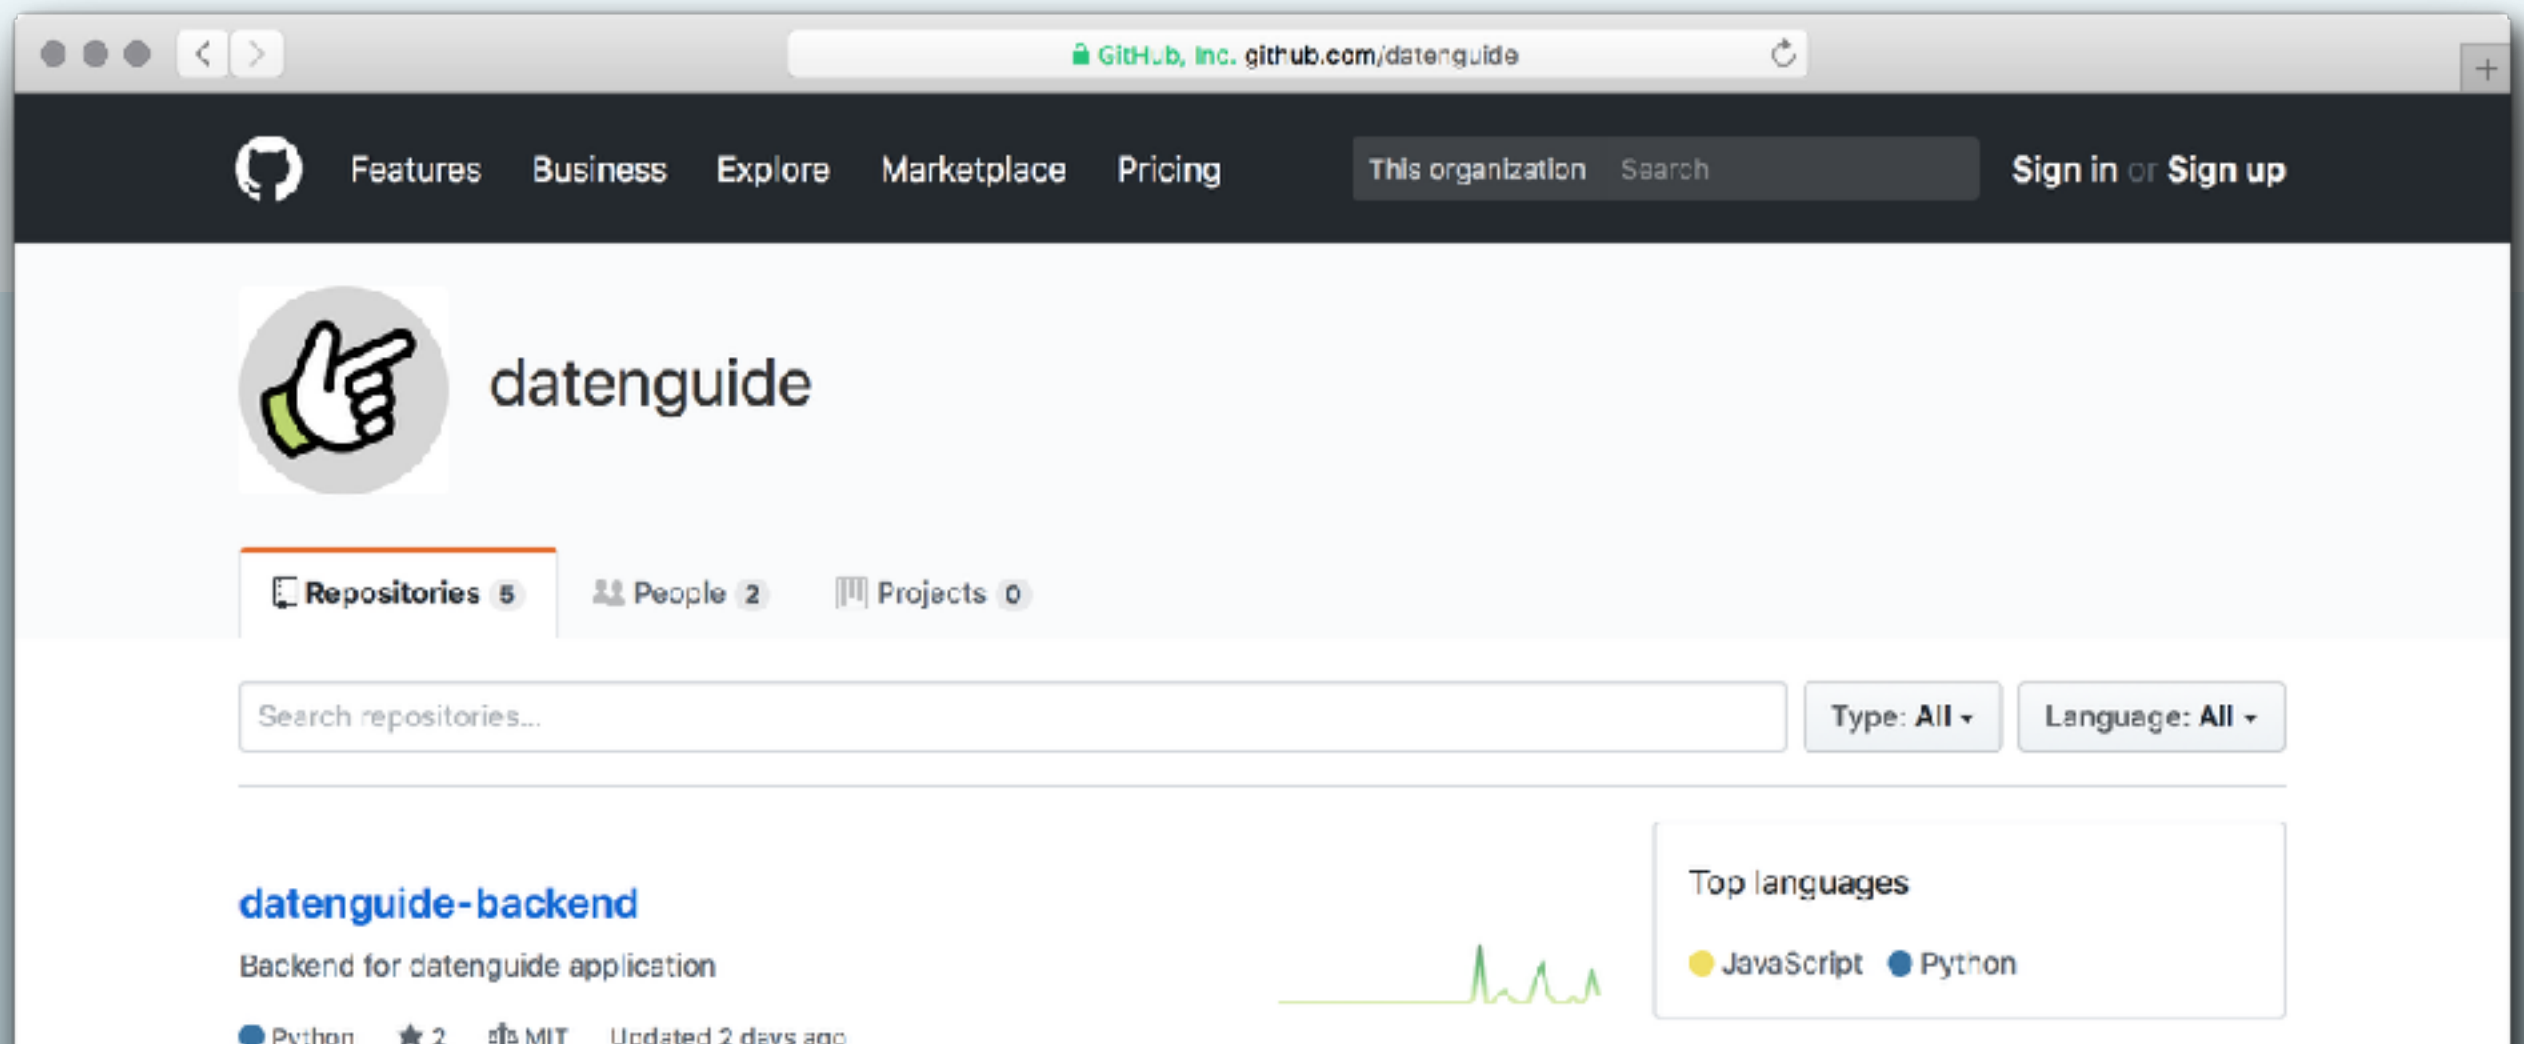

- **“Genesis”** Data Portal Software
 - **Several instances** (genesis-online.de, regionalstatistik.de)
 - Data cube with **SOAP-API**
 - Frontend provides non-machine-readable **CSV & Excel** downloads
- **Data Licence Germany** – Attribution – Version 2.0 (dl-de/by-2-0)

Problems

- **Crappy software**
made for bureaucrats by bureaucrats
- **Not usable for normal people**
such as journalists, civil society orgs
- **Data is not easily reusable**
no open, machine-readable data formats;
no modern APIs

open source

👉 github.com/datenguide

Datenguide data pipeline

Data import

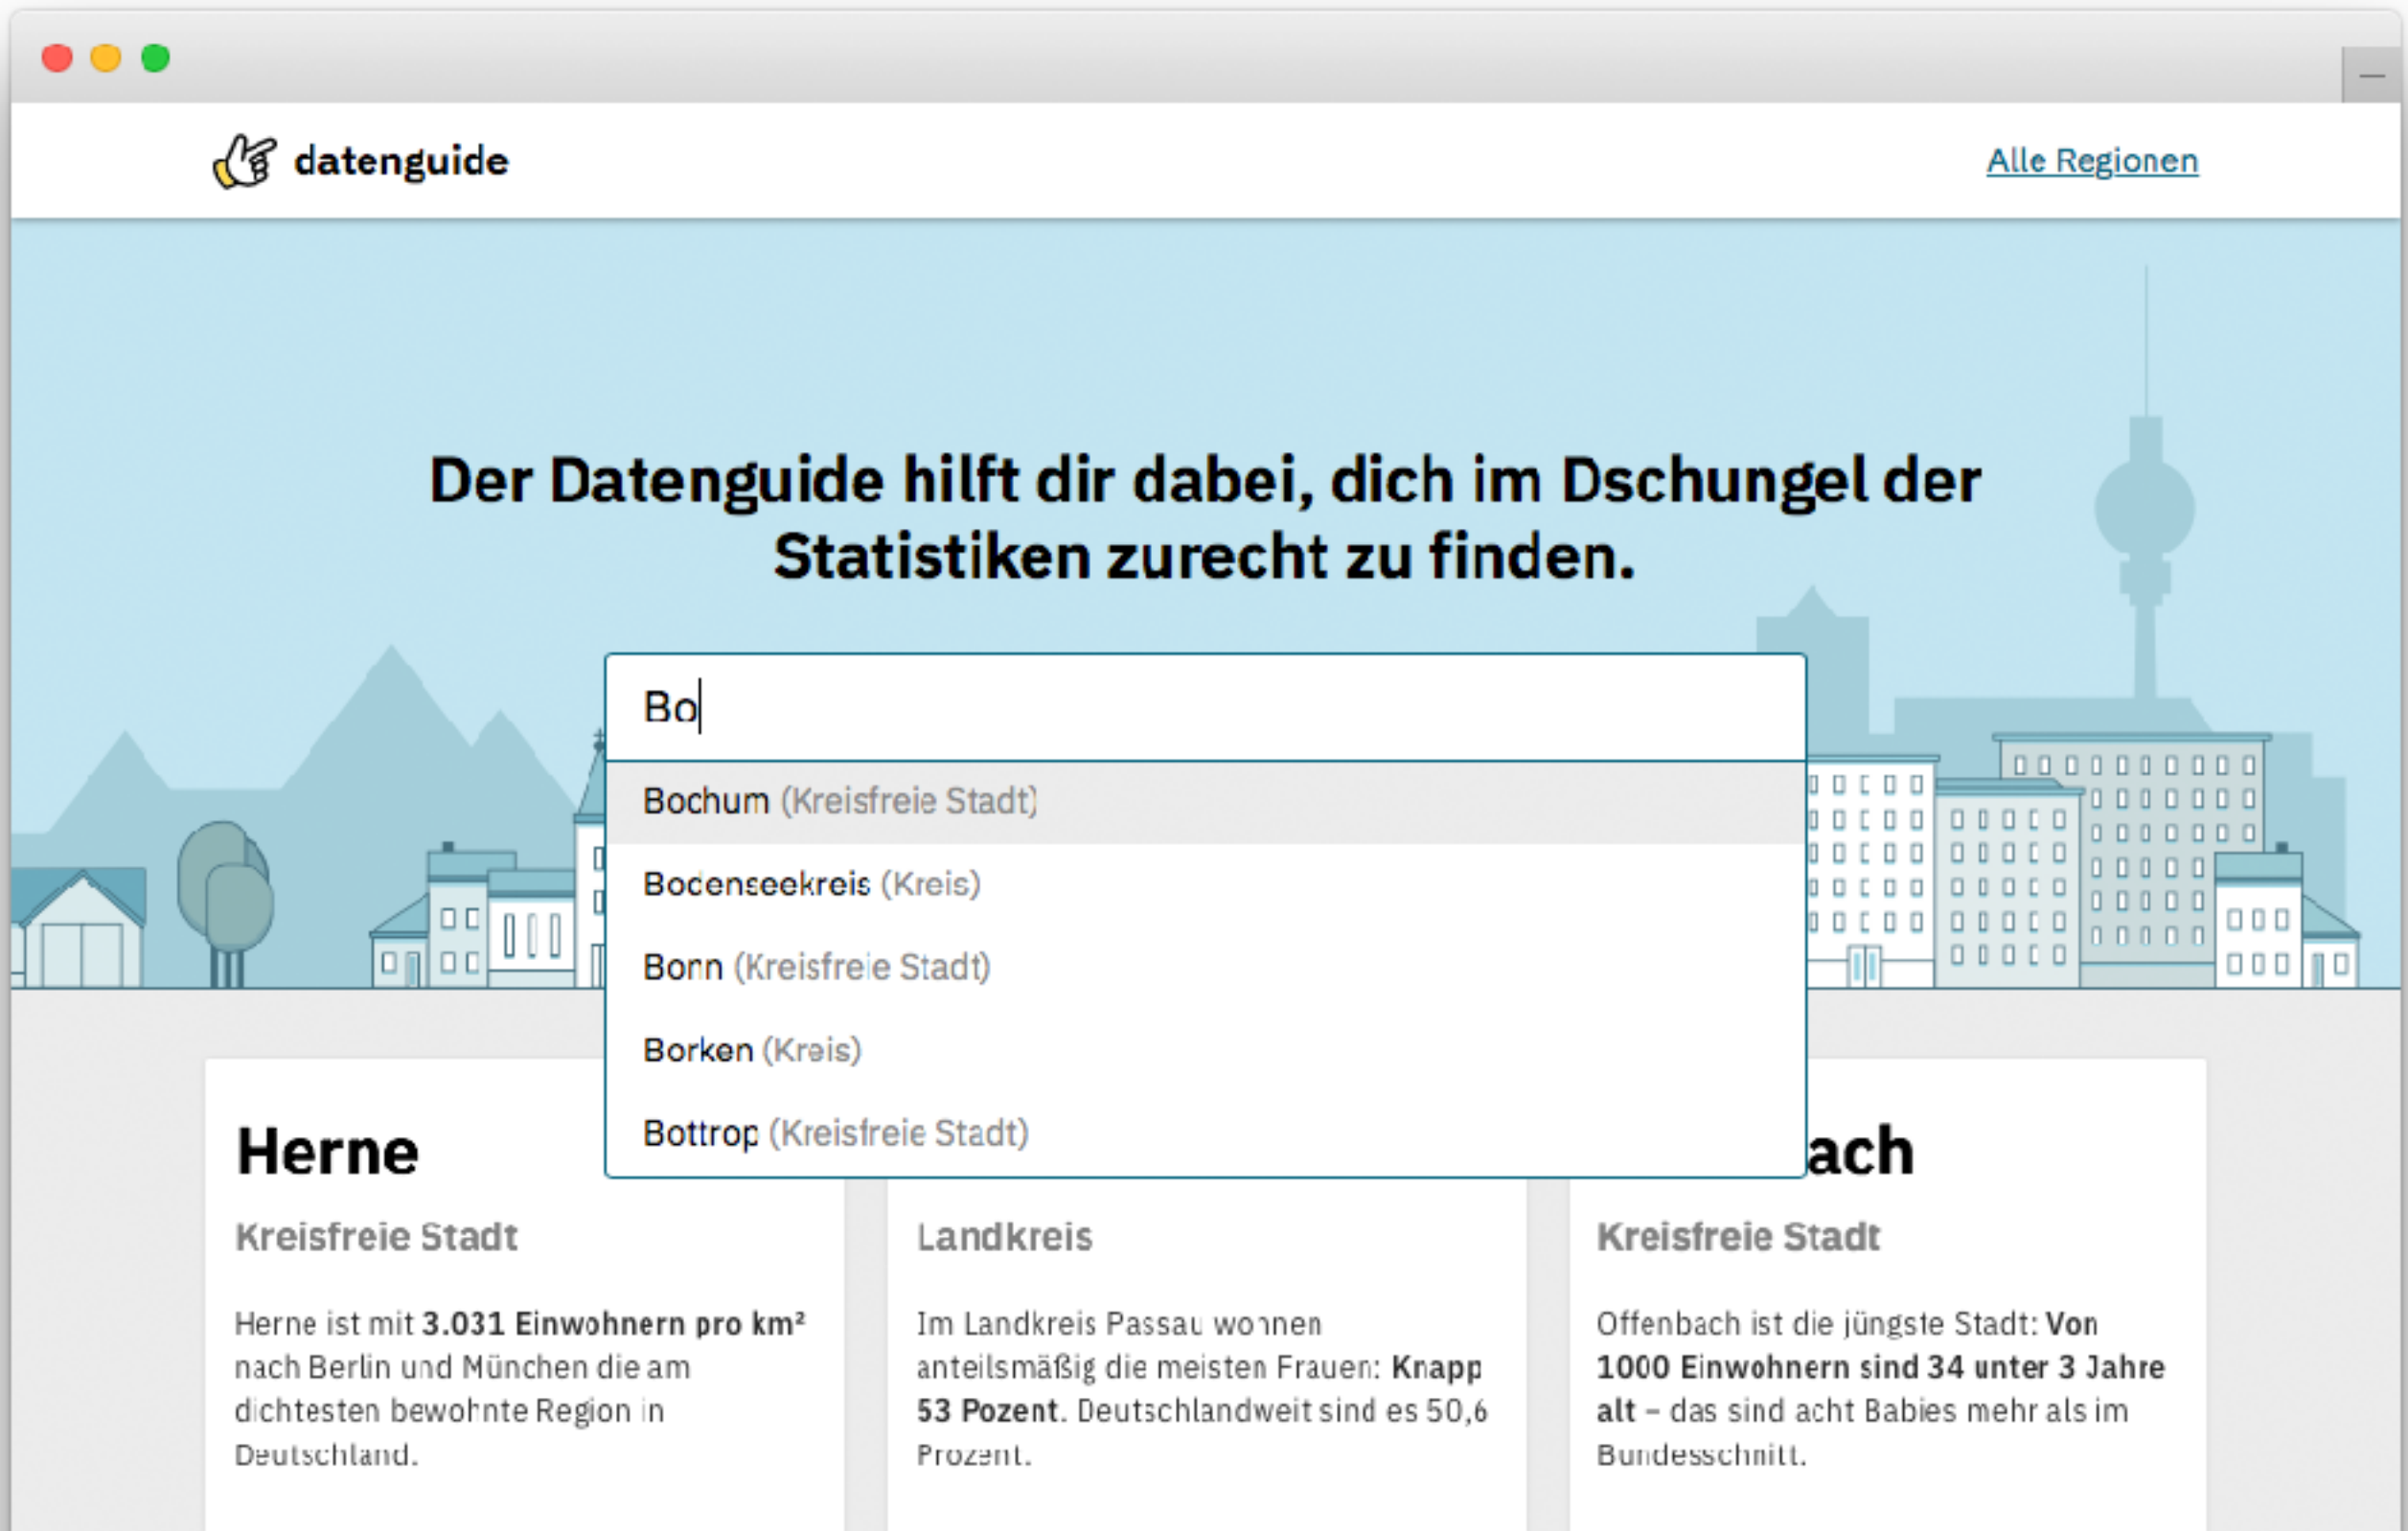

GraphQL API

Data portal

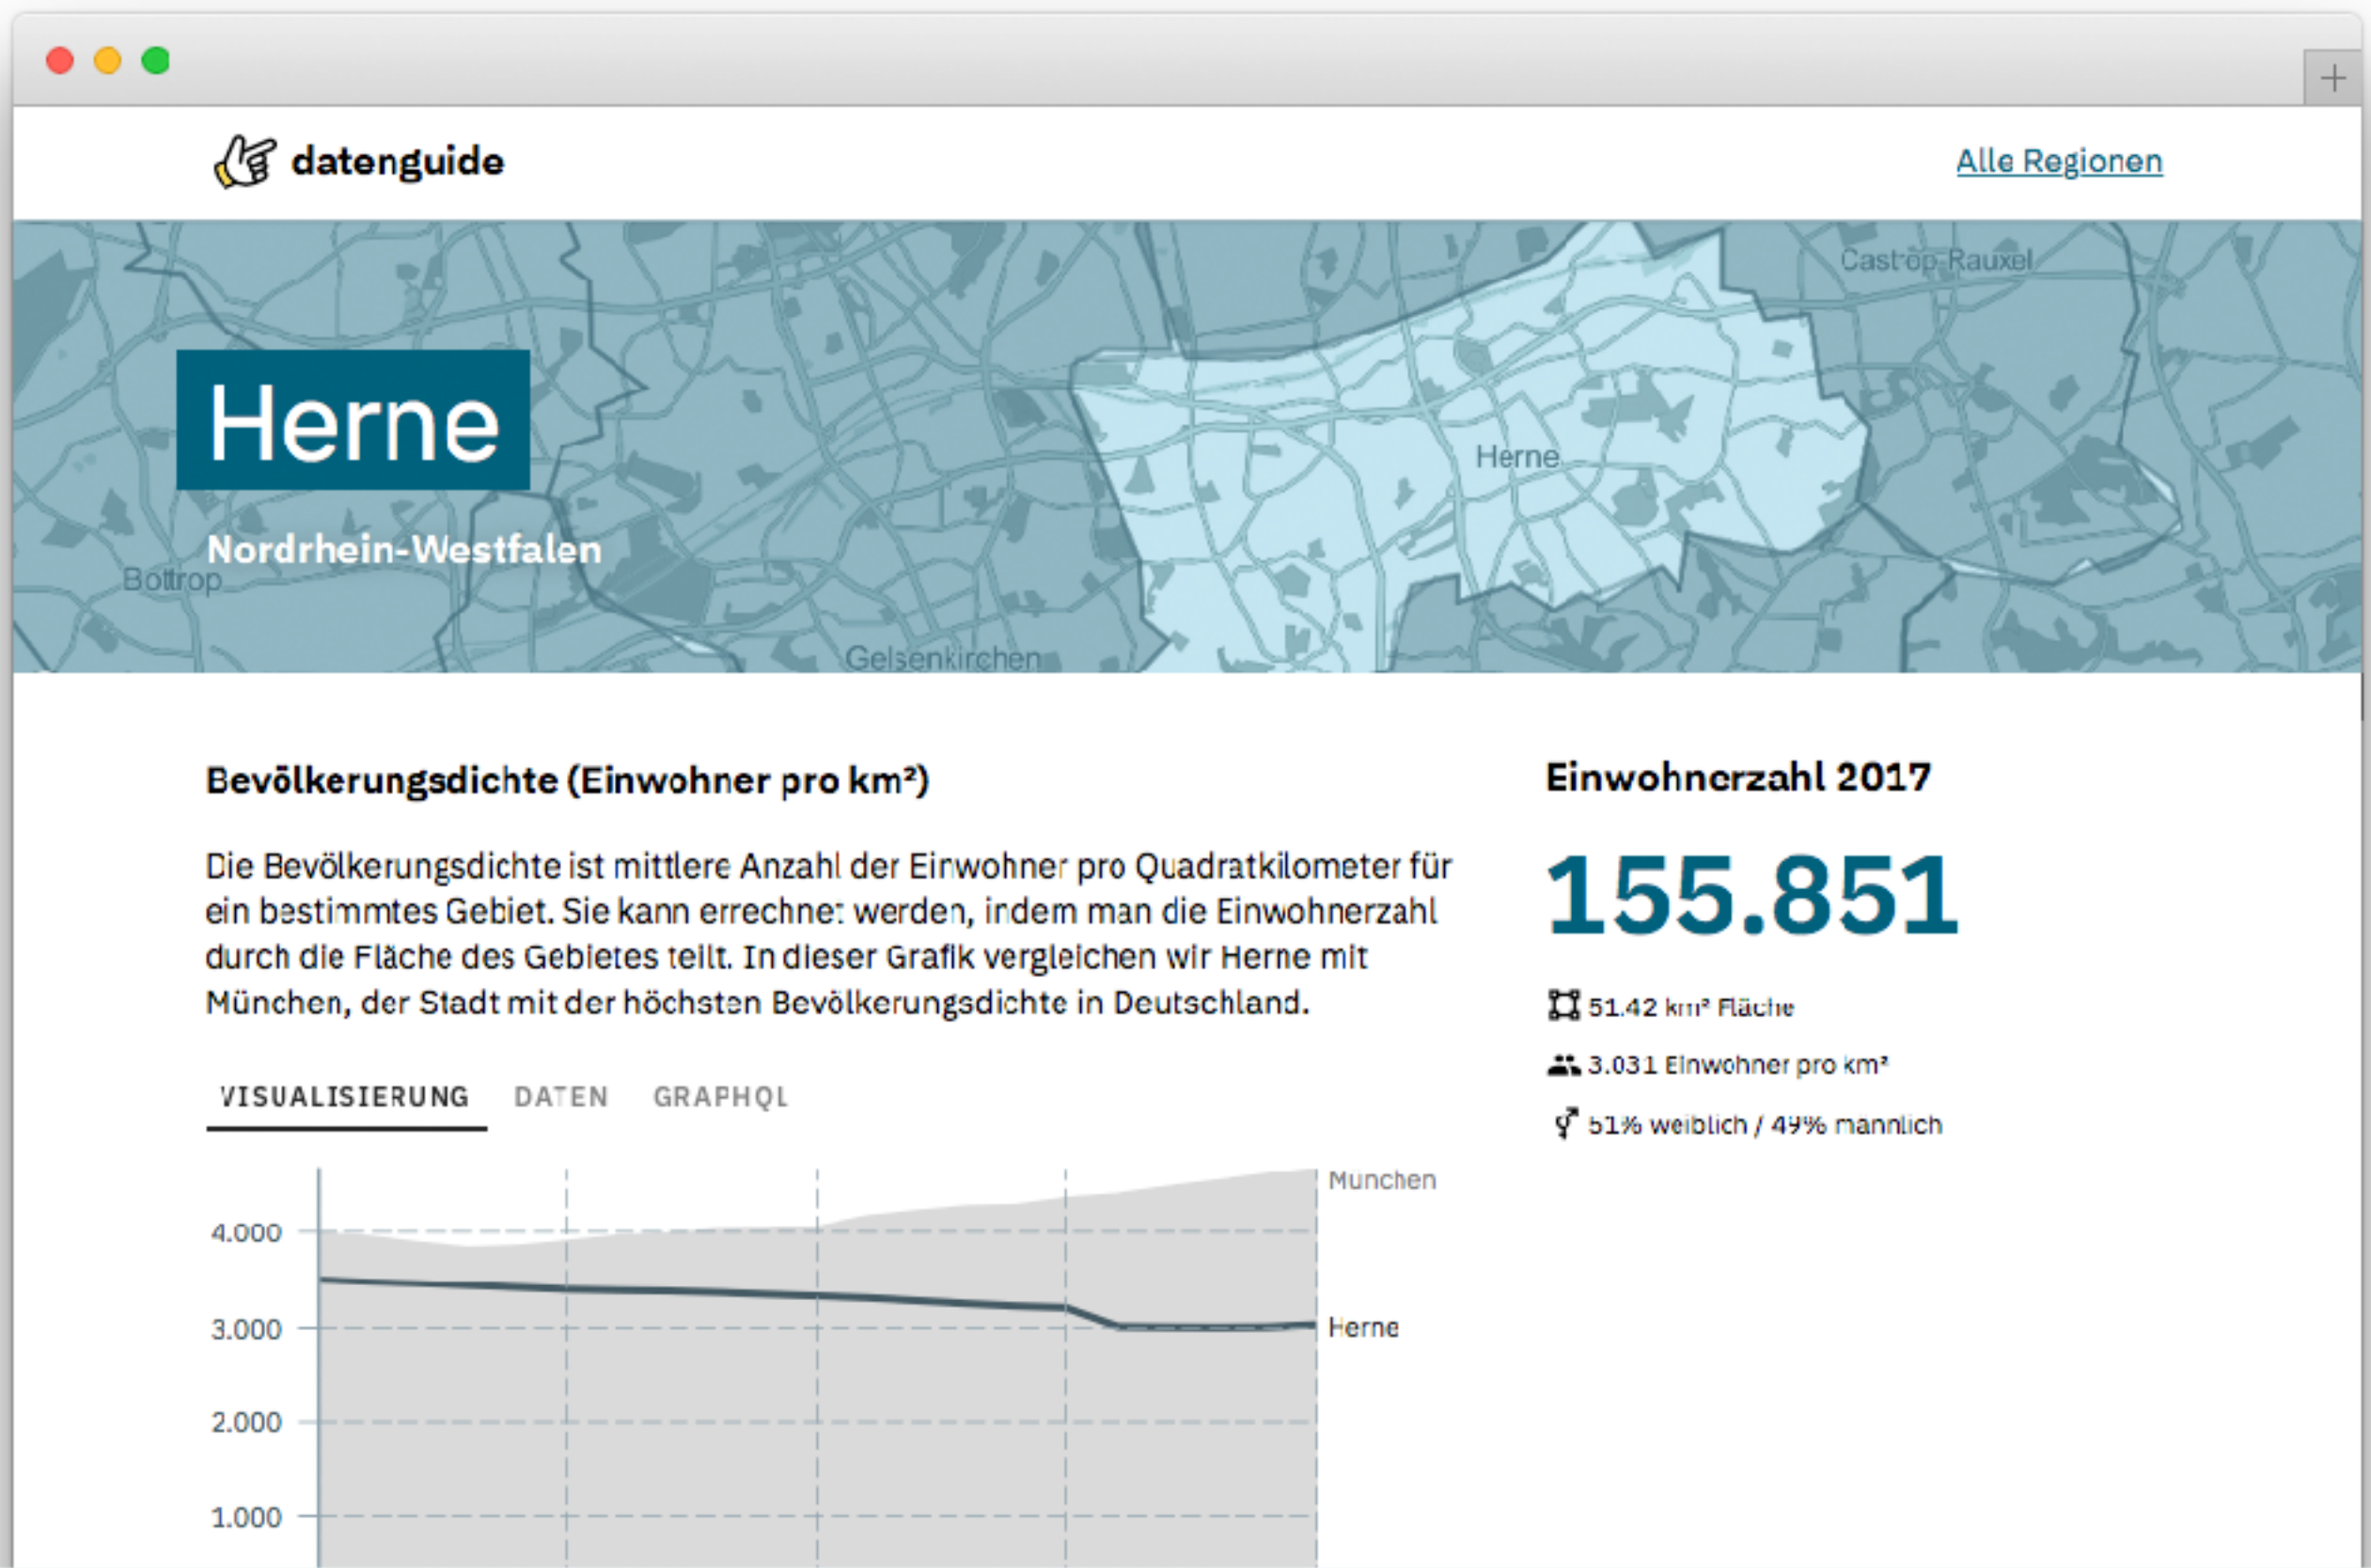

datenguide-frontend

- Generates individual pages for all **German regions** (NUTS 1-3):
 - 16 Federal states
 - ~ 400 Districts (Landkreise) and cities
- **Visualises and explains** the data
- Provides **machine-readable CSV**

datengui.de (frontend)

datengui.de (frontend)

datenguide-frontend

“**JAM-Stack**” (with **Gatsby & React**):

- **JavaScript** for dynamic functionality
- Built upon reusable **APIs**, accessed over HTTPS with JavaScript
- Static **markup**, prebuilt at deploy time

Datenguide API

Data import

GraphQL API

Your use case

👉 <https://api.genesapi.org/> (alpha!)

datenguide-backend

- **Python, Flask, and Elastic Search**
 - **Imports official statistics** data from “Genesis” instances, building upon github.com/pudo/regenesis
 - Focus on data from **regionalstatistik.de**
 - Provides a **GraphQL API**
- 👉 github.com/datenguide/datenguide-backend

API demo

```
query {  
  regions(nuts: 3, parent: "10") {  
    name  
    WAHLSR(year: "2017") {  
      value  
    }  
  }  
}
```
